TECHNICAL INFORMATION FOR ASTERIS REPOSITORY SOFTWARE

- Radiographs and Reports may be submitted to the Repository in two ways;
 - 1) Online
 - a. To submit a study online please use the following link to download the Keystone Community Software:
 - b. [Asteris - Keystone Omni](#)
 - c. The following link is for the install/user guide for the Keystone Community software: [OBS Repository Guide.pdf](#)
 - d. If a veterinary practice is an existing Asteris Keystone customer submissions may be uploaded directly from the Asteris Clinic management software. For further information please contact Asteris about using this feature.
 - 2) Directly to the Repository
 - a. Radiographs may be submitted on an external hard drive, USB drive, CD or DVD.
 - b. One hip per CD/DVD
 - c. ALL IMAGES PER HIP MUST BE IN A SINGLE DICOM FOLDER
- Please label the studies in the following manner;
 - a. Patient -- Hip Number as it is in the catalogue (horses' names are not required) When inputting the hip number be sure to use four digits i.e. 0001 for Hip 1.
 - b. Owner -- Consignor as listed in catalog
 - c. Accession Number – Day the horse sells and hip number i.e. Day 1-0001
- We recommend a recent version of Internet Explorer as the best browser on a PC (or Mac running Bootcamp/Windows) and using the “DICOM Images” option for diagnostic quality images.
- The “JPEG Images” option works well over slower connections however it is not recommended for a final diagnosis as the quality is not high enough. To get the best out of the JPEG mode please install Microsoft Silverlight so you can rotate and zoom images.
- An Internet connection with a download speed of 1.5mbit/s or higher is recommended to view the DICOM Images.
- Keystone Community (the software that uploads radiographs) detects installations of Merge eFilm, Sound VetPACS, IDEXX EquiView and Asteris Discovery when it starts. It acts as a DICOM server and can communicate via that method with many compatible PACS systems or simply Drag and Drop DCM/DICOM formatted files at step 2 of the software. You can drag an entire folder or individual files for one complete study.
- Please disable “burned-in” image labeling (annotations) if your DR system supports it.
- Hanging Protocols -- Our system is hanging protocol aware and can be customized depending on how effectively the horse can be identified during uploading of the study. If you want the viewing vet to be able to adjust the hanging protocol used, we recommend you upload your study and match any images which can't be automatically identified. Uploading your own studies online allows the submitting vet full control over the process and more accuracy as the automatic options do not always match perfectly. If you have a Digital Radiograph machine that is **new to market or recently updated** please encourage your machine vendor to contact Asteris so they can work with the vendor to automate the hanging protocol detection system in their software. It is advisable to submit a sample set of radiographs before a sale to help eliminate potential problems.
