#### TECHNICAL INFORMATION FOR ASTERIS REPOSITORY SOFTWARE

- Radiographs and Reports may be submitted to the Repository in two ways;
  - 1) Online
    - a. To submit a study online, please use the following link to register or connect your Keystone Community account. **PLEASE NOTE: SUBMITTING RADIOGRAPHS AND VIEWING RADIOGRAPHS REQUIRE TWO DIFFERENT LOG-IN CREDENTIALS.** Please contact Asteris if you have any questions.
    - b. [Asteris - Keystone Omni](#)
    - c. If a veterinary practice is an existing Asteris Keystone customer submissions may be uploaded directly from the Asteris Clinic management software. For further information please contact Asteris about using this feature.
  - 2) Directly to the Repository
    - a. Radiographs may be submitted on an external hard drive, USB drive, CD or DVD.
    - b. One hip per CD/DVD
    - c. ALL IMAGES PER HIP MUST BE IN A SINGLE DICOM FOLDER
- Please label the studies in the following manner;
  - a. Patient -- Hip Number as it is in the catalogue (horses' names are not required) When inputting the hip number be sure to use four digits i.e. 0001 for Hip 1.
  - b. Owner -- Consignor as listed in catalog
  - c. Accession Number – Day the horse sells and hip number i.e. Day 1-0001
- PLEASE NOTE: SUBMITTING RADIOGRAPHS AND VIEWING RADIOGRAPHS REQUIRE TWO DIFFERENT LOG IN CREDENTIALS. Please contact Asteris if you have any questions.
- We recommend the most recent version of Google Chrome for uploading and viewing diagnostic images.
- An Internet connection with a download speed of 1.5mbit/s or higher is recommended to view the DICOM Images.
- Please disable “burned-in” image labeling (annotations) if your DR system supports it.
- Hanging Protocols -- Our system is hanging protocol aware and can be customized depending on how effectively the horse can be identified during uploading of the study. If you want the viewing vet to be able to adjust the hanging protocol used, we recommend you upload your study and match any images which can't be automatically identified. Uploading your own studies online allows the submitting vet full control over the process and more accuracy as the automatic options do not always match perfectly. If you have a Digital Radiograph machine that is new to market or recently updated please encourage your machine vendor to contact Asteris so they can work with the vendor to automate the hanging protocol detection system in their software

## **PROTOCOL FOR PRE-SALE VIDEOENDOSCOPIC EXAMINATION OF THE UPPER AIRWAY AT PUBLIC AUCTION**

- Equipment must be capable of producing a digital video image of excellent quality.
- Horse must be identified appropriately, and that identification must be in digital format with character generation on the screen, and / or video of the catalog page, followed by unbroken video of the face prior to introduction of the scope into the nares (right or left) and up to the larynx. This is a single stream video with no editing.
- The veterinarian performing the video endoscopy may upload the video at the same time radiographs are uploaded to the OBS repository. Veterinarians or the consignor may also submit each upper airway video on an individual flash drive or CD. Upper airway videos should be stored in a file separate from the radiographs.
- Standard technique must include maximal abduction of arytenoids induced by swallowing (multiple times) and nasal occlusion. The duration of the video must be sufficient to identify all laryngeal and pharyngeal structures as well as observing their maximal function within the context of a resting exam.
- The interval between the pre-sale videoendoscopic exam and the selling session will not exceed (10) days.

# Walking Video and Conformation Photo Guidelines

Consignors will be able to provide walking videos of all of their horses to be displayed on the OBS Sortable Master Index.

**Consignors will be responsible for procuring their own videographers to produce and supply videos.** Consignors should keep in mind the following:

- **FILE SIZE:** walking videos should be 45-60 seconds in length. File size should not exceed 20 mb
- **SHOT SEQUENCE:** For walking videos, we recommend the following shot sequence

  2. Walking left to right
  3. Walking right to left
  4. Walking away
  5. Walking toward
  6. Conformation shot
- **GRAPHICS:** OBS has created graphic packages for you to add to your video with the proper identifying information. This will help create a more standardized look for all of the videos. You may access these graphic templates are on the website under Consignor Information.
- **PERSONAL VIDEOS:** We urge you to use a professional videographer to best present your horse, but If you choose to create a walking videos yourself please follow these recommendations;
  - Be sure to hold your camera/smart phone in landscape (sideways) orientation.
  - Have your camera settings adjusted to 1920 x 1080 and 30 frames per second.
  - Please familiarize yourself with the **Tips for shooting horse videos** below
  - Please be sure to adhere to file size requirements listed above.
  - If you do not have the capability to add graphics to your video, you may use audio to properly identify each horse.

## Photos

- Photos should be a conformation shot with no added graphics and saved as a .jpg **THIS IS THE ONLY FILE COMPATIBLE FORMAT.** They may be supplied via a flash drive or electronically through Drop Box or We Transfer.
- **NAMING OF FILES (VERY IMPORTANT):** photos should be named with the hip number followed by the letter “p” **ONLY.** **DO NOT PUT ANY OTHER INFORMATION (DAM, SIRE, ETC.) IN THE NAME OF THE FILE.** For example, if the photo is of hip number 54, the file should be named, “54p.jpg”
- **FILE SIZE:** photos should be no larger than 1250 x 1000 pixels and the file should not exceed 2mb  
Once the files are delivered to OBS, please allow up to 48 hours for them to be available on the website. We will post them online as quickly as possible. Please be sure files are labeled correctly. We receive thousands of individual media files and proper file labels will speed up the process immensely. If you have any questions you may contact Wes Peterson in the OBS office. OBS reserves the right to not accept any videos we feel does not represent the horse well.

## **Tips for shooting horse videos**

- Photographer should keep the sun to their back and avoid harsh shadows on horses
- Shooting on a slightly cloudy day is fine and usually prevents shadows. Do not shoot if it is raining.
- The ideal shooting location should allow 40 or more feet for the horse to walk in a straight line. The area should be flat with a pleasing background that is free of distractions.
- When shooting with a cell phone maintain a distance of about 20 feet from the horse. This will ensure the entire horse is included in the frame.
- Walking on a hard surface shows the entire feet. If horse is walking on grass please make sure it is freshly cut. If walking on mulch or other material make sure it has been raked.
- If your phone or camera records in a format other than the required .mp4 file type it will need to be converted. The easiest way is to upload your video to Youtube. When the video finishes processing just click the download button. The file will be sent back to you as an .mp4.
